Clueless Closet

Problem

Picking outfits is time-consuming and allows oversight for certain items

Solution

Smart home device that picks outfits based on inputted parameters

- Programmed webpage in R
- Prototype of rotating closet using arduino

STEP 1

UPLOAD YOUR ITEMS

- TYPE OF CLOTHING
 - Top, Bottom, Shoes, Jacket
- CATEGORY
 - Long Sleeves, Short Sleeves, Long Pants, Shorts
- STYLE
 - Formal, Semi-Formal, Business Casual, Casual, Athleisure, Lounge
- COLOR
 - Color, Neutral (Black, Brown, etc)
- COMFORTABILITY
 - Rate from 1-5

STEP 2

TIME TO GO OUT!

When you want an outfit, let the closet know what style you want and how comfy you want to be by inputting:

- Style
 - Formal, Semi-Formal, Business Casual, Casual, Athleisure, Lounge
- Comfortability
 - Rate from 1-5

Pick Your Outfit

Current Location: Fayetteville, AR

32.8

Comfortability:

Choose an occasion:

formal

STEP 3

GET YOUR OUTFIT

1. The closet will take in your inputs
2. Check the current weather (Hot/Cold, Raining/Not) using an API,
3. Output ID numbers that correlate to the outfit
4. The closet will then rotate to the different sections of clothing

Pick Your Outfit

Current Location: Fayetteville, AR

32.8

Comfortability:

Choose an occasion:

formal
